OFFSET

Designed by Francesco Meda, David Lopez Quincoces

"This design aims to draw attention to the value of its materials and structural solutions, as well as the beauty these generate". Francesco Meda and David Lopez Quincoces.

The new Offset table designed by the Meda-Quincoces duo finds its poetic ethos in minimalism.

The protagonist of the design is the purity of the material used, a fundamental feature of the MDF Italia heritage: here it is brushed anodised aluminium.

The simplicity of the lines, carried to a wide range of sizes, including extra-large, combines lightness and a statement look in the chameleonic, universal style of an industrial material capable of blending seamlessly into various domestic and contract contexts.

The Offset table system is ideal for both indoor and outdoor use, and it is characterized by extreme flexibility. It can feature tops in various materials, such as back-painted glass, aluminium or glazed ceramic.

A product that succeeds in being minimalist in design but also in its environmental impact: the flat pack allows a reduction in transport volumes, the materials used are 100% recyclable and easily disassembled to allow a proper recycling process.

DIMENSIONS

Tables H73 available in 22 different sizes.

TOPS

Tops are recessed and do not require any securing hardware. Available in:

- Back-painted tempered glass in the colours dune (ral.1001), burgundy (ral.3007), English green (ral.6007), navy blue (ral.5004), black (ral.9005) and white. Thickness: 8 mm.
- Natural satin-finish anodised aluminium painted with transparent matt protective coating. Thickness: 6 mm.
- Glass-ceramic glaze available in bright sage green, brick red and stone grey. Thickness: 7 mm.

The glazed surface is made of a special material obtained from the recovered glass of discarded TV and PC monitors, directly applied to the ceramic by means of an exclusive manufacturing process.

Visual irregularities, nuances, a lack of uniformity of both surface and material colour are deemed traits of value and uniqueness.

STRUCTURE

The frame is composed of only two extruded elements joined together fluidly by way of a high-precision mechanical processing method and sections that conceal the attachments.

Extruded aluminium legs, round section, diam. 40 mm, with internal steel structural tie-rod only for lengths over 260 cm. Extruded aluminium perimeter structure, height 40 mm. Available in the following finishes: brushed anodised aluminium or painted matt lead black.

OUTDOOR VERSION

Tables with aluminium and glass-ceramic glazed tops can be used outdoors, in the dimensions D100 L180/240/300, D120 L120, D148 L148, D180 L180. Ceramic tops are divided into several parts.
