## SAG

Designed by Nendo / Oki Sato

Sag, which can be used as a low table or stool, is a dynamic complement that fits naturally into any outdoor setting: gardens and terraces. Made of polyurethane and available in white or mud for outdoor use, Sag reinterprets the traditional stool with originality in a dynamic and fluid form.

[DISCOVER THE INDOOR VERSION](#)

## STRUCTURE

Frame in stiff polyurethane, obtained through moulding, available in gofferred matt white and matt mud. The polyurethane used, called TECH, is a structural and high-density material, which means it is highly shock-resistant, as well as scratch-resistant and resistant to ageing.

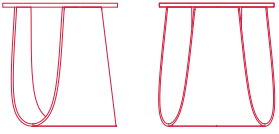

## SEAT

The outdoor version is only available with polyurethane tops only, in white and mud colours. The polyurethane version is moulded in a soft integral polyurethane called Freeform (with plywood insert). The variants with frame and seat in polyurethane, are perfect in both indoor and outdoor environments.

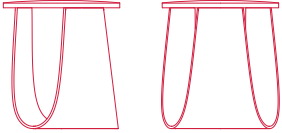

## INDOOR VERSION

Available stool with bamboo top for indoor use only. The wood variant is composed of a bamboo veneered plywood panel, with narrow plank and evaporated finish.
